

GEOFOR PVC WATERSTOP TAPES

PVC-based waterstop tapes are manufactured according to the specifications stated in TSE 3078-1 and TSE 3078-2 standards. In structures where horizontal and vertical movements are anticipated for various reasons, water insulation problems are observed, especially in cold joints located underground. PVC water retaining tapes are used in horizontal and vertical cold joint insulation and are placed in accordance with the reinforcement intervals before concrete pouring is carried out.

Fields of Use

- Barrages
- Underground Reinforced Concrete Structure
- Pools
- Bridges
- Water Tanks
- Tunnels
- Retaining Walls
- Headwall
- Reinforced Concrete Curtains
- Water Treatment Stations
- Raft Foundations
- Irrigation Facilities
